

Digital Product Passport

How would you collaborate with Collins Aerospace to enable more seamless collection and sharing of key product information as part of the growing Digital Product Passport ecosystem?

Collins is a signatory to the Fly Net Zero declaration as part of our greater commitment to the positive impact of sustainability on our world. The ability to provide greater transparency of data across the lifecycle of products is a key pillar to that commitment. As the aerospace industry continues to move towards circularity, we are looking to collaborate with providers of Digital Product Passport applications, point of manufacture data collection technologies, and novel data computation, storage, or access management approaches across the product value chain. Such providers will work with Collins to understand our current data streams, demonstrate their capabilities at initial scale, and develop a roadmap for future expansion.
