

# Dynamic Travel Time

How would you collaborate with Collins Aerospace to leverage predictive analytics in creating an end-to-end, multimodal travel time estimate?

Over 8 billion passengers, 50 million metric tons of cargo, and 550,000 patients in the United States alone were transported by global air travel in 2023. FlightAware, part of Collins Aerospace, is a digital aviation intelligence leader, helping monitor and predict global aircraft movements. As national and international air systems continue to grow and become more integrated with middle and last mile transit, we are looking to collaborate with data-driven advanced transportation technology providers to expand the accuracy and accessibility of trip time and arrival predictions. Such providers will work with the predictive technology team to integrate FlightAware's Foresight data streams and machine-learning based prediction algorithms with their offerings to prototype novel cost and time saving functionality for their customers.
