

Touch down and save with our new 3G/4G/LTE connectivity service.

GROUND CONNECTIVITY THAT JUST MAKES SENSE

Being connected in flight enables you to work and relax just like you are in your home or office. Now, when the aircraft is on the ground, there's a cost-effective new option for being connected. With Rockwell Collins' ARINCDirectSM Ground Connect, passengers and pilots can utilize onboard 3G/4G/LTE cellular connectivity – without throttling and without network roaming.

MORE COUNTRIES. MORE COVERAGE.

With service in over 185 countries and territories, passengers will be able to catch up on emails, make an important call or relax and stream the latest episode of their favorite show. Powered by GigSky World Mobile Data, ARINCDirect Ground Connect allows pilots to quickly and easily update flight plans, retrieve real-time weather information and sync their EFBs.

Our seamless cost-effective solution is available as soon as wheels hit the ground, offering extensive service at industry leading speeds.

ONE CARD. ANY ROUTER. ONE BILL.

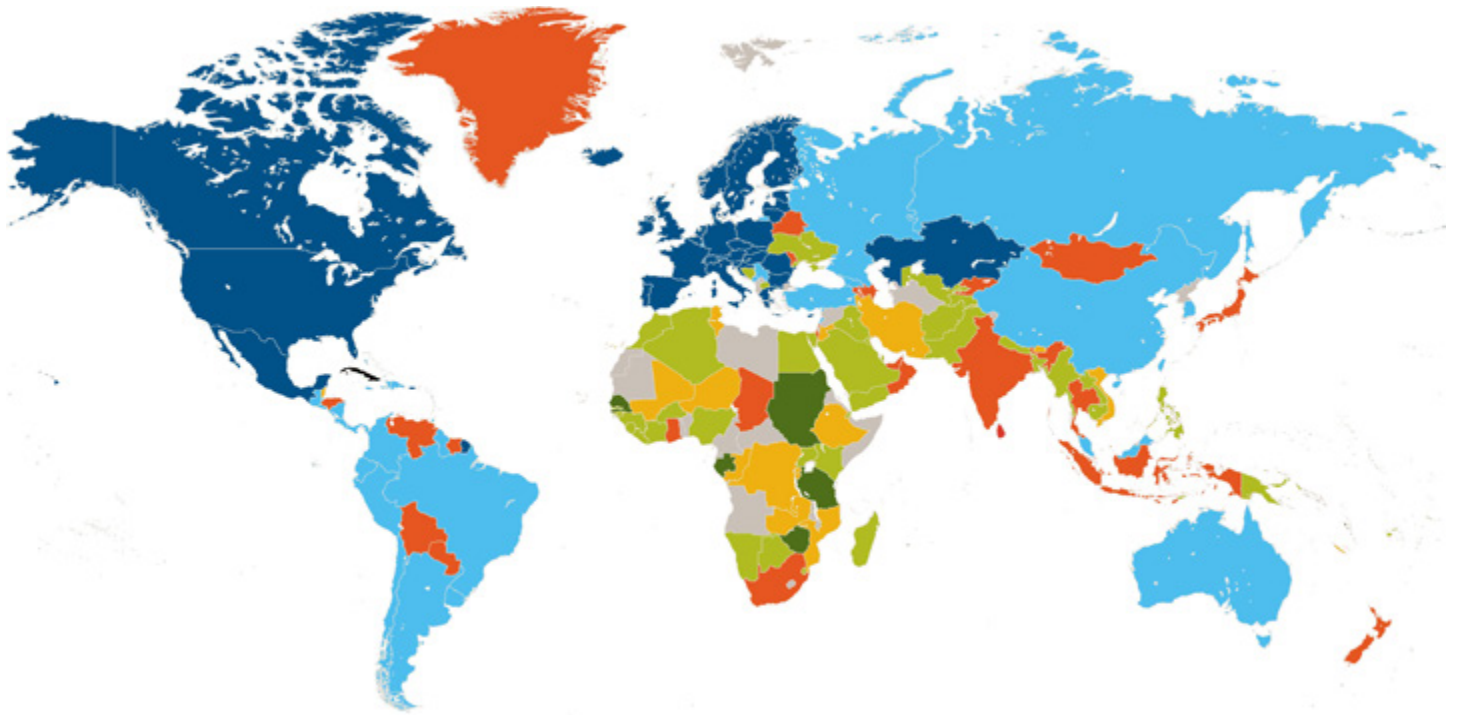

ARINCDirect Ground Connect provides global connectivity on a single SIM card. It will work with just about any GSM-compatible airborne router or device including the ARINCDirect Airborne Data Router (ADR). No more juggling multiple mobile data cards. And no more complicated bills. Our zone-pricing lets you select specific subscription plan regions while providing the flexibility to connect outside of them as needs arise. We eliminate the frustration of managing a global service by providing usage notifications and an all-inclusive easy to understand bill.

For fast, reliable ground connectivity that just makes sense, contact us and ask about ARINCDirect Ground Connect.

KEY BENEFITS

- > Service in over 185 countries and territories
- > Universally compatible with most GSM enabled devices
- > Cost effective option for being connected on the ground
