INTELISIGHT™ RAPID DEPLOYMENT

FULL CAPABILITY, INSTALLED OVERNIGHT

Immediate access to valuable aircraft data

At Collins Aerospace, we understand that waiting for a scheduled maintenance check to install a connected aircraft solution can delay fleet-wide deployment and benefits capture. To enable airlines to rapidly realize operational efficiencies, increase safety and improve the passenger experience, we have developed a "plug and play" installation solution: InteliSight™ Rapid Deployment.

InteliSight Lite enables many electronic flight bag (EFB) and data collection functions with a single connection to an existing maintenance port, which provides access to the ARINC 717 data stream. With this single connection, an operator has immediate access to a rich set of aircraft data parameters.

This accessibility enables many value-creating applications, including:

- Recording, encrypting and offload of full flight data with the Collins virtual Quick Access Recorder plus (vQAR+)

- Charting applications

- Electronic flight folder with full navigation (including time and fuel)

- Automatic report generation

With this installation, an airline can realize immediate fleet-wide benefits from aircraft connectivity while minimizing impact on maintenance operations.

KEY FEATURES AND BENEFITS

- Enables rapid fleet-wide deployment so airlines can realize full benefits of aircraft connectivity in weeks instead of months

- Dramatically reduced installation time and cost

- Access to ARINC 717 full flight data stream

- AID and TIM® LRUs are reusable for full system installation during planned maintenance checks

- Enables multiple applications, including vQAR+, ACMS+, electronic flight folder and many more
