- Viasat Ku-band Advanced
- Viasat Ka/Ku Dual-Band

TOOLS TO STREAMLINE YOUR CABIN MANAGEMENT

CABIN SOLUTION ENHANCEMENTS

No matter what your passengers are looking to do, Collins' ARINCDirect cabin solutions provide the foundation for a relaxing and productive passenger experience – in any location, at any flight level. While passengers enjoy their flight, you'll have the tools and applications to track, troubleshoot and manage the connectivity and data on the aircraft. Keep your service running seamlessly with ARINCDirect.

DASHBOARD

Accessible from your mobile device or desktop, the ARINCDirect dashboard keeps you updated about information such as your cabin data usage and aircraft status no matter where you are, at your desk or on the go.

USAGE DETAILS

Whether it's voice or data connectivity, our usage details feature allows you to access and manage your usage.

COVERAGE OVERLAY MAPS

Pilots can overlay up to five different coverage maps on their route to determine if they are flying out of satellite coverage. This ensures seamless connectivity for your passengers.

CONTENT FILTERING

Our content filtering allows you and your flight department to control costs by determining the type of content passengers can access.

CABIN USAGE APP

The iOS application allows you to view how your cabin connectivity is being used.

NETWORK ANALYZER APP

Easy-to-use network troubleshooting tools to check connectivity prior to a flight and help restore connectivity in flight in the event of an outage.

ADCONNECT VOIP APP

Allows passengers to call anywhere in the world directly from their smartphone.

ARINC DIRECT DIAL

Ground-to-air telephone service provides a single aircraft or your entire fleet with a standard local phone number for routing calls to any handset in the aircraft.

WE PROTECT YOUR INFORMATION EVERYWHERE IT GOES – AND YOU IN THE PROCESS

CYBERSECURITY

At Collins Aerospace, cybersecurity isn't just a product, it's the foundation of what we do. Our aviation network moves more than 20 million messages a day. It's built to constantly analyze and identify normal and suspicious activities. No unrecognizable traffic goes into an aircraft with ARINCDirect connectivity without permission. Here is how we keep your data secure:

- Monitoring your data flow and touch points 24/7/365
- Understanding all of the traffic crossing our network, including applications, users and devices
- Blocking access to your IP address and replacing it with ours
- Using the most secure network available in aviation today – the same used by commercial airlines for credit card information

NEVER WAIT TO MAKE YOUR MOST IMPORTANT CALLS

VOICE SOLUTIONS

Whether it's business or pleasure, sometimes nothing can replace picking up the phone and speaking to someone. Collins' ARINCDirect provides a variety of voice services so your passengers can make and receive important calls just like they would on the ground, allowing them to easily stay connected to their business, family and friends while in flight.

VOICE SERVICE OPTIONS

- Inmarsat Classic Aero
- Iridium® Certus
- ARINCDirect Dial
