

## GLOBAL SERVICE AND SUPPORT

### Maximum aircraft availability

From installation to maintenance and throughout the aircraft's life cycle, Collins worldwide support network offers solutions with exceptional part availability, reliability and affordability.

Our Collins Aircraft Service Program (CASPPM) provides the flexibility to choose a maintenance and service plan that best fits your needs. CASP is tailored to your operational requirements, offering minimal unplanned maintenance events and a predictable budget.

## SENSIBLE, EFFICIENT MODERNIZATION

Address obsolescence while enhancing the passenger experience

## QUALITY WITHOUT COMPROMISE

Consider the cost of your aircraft being grounded while you wait for a part that might not exist anymore. All platforms, including your Challenger 300 (CL-300), will at some point require modernization in order to address obsolescence challenges.

The obsolescence battle is real and Collins Aerospace is ready to help you win.

### FUTURE-READY CAPABILITIES

Your cabin is the most personal connection you have to your aircraft. Customize it with our high-quality systems, designed to suit your business and personal preferences.

With our Venue™ Cabin Management System (CMS), control is at your fingertips. Enjoy the everyday comforts of home or office while traveling in your CL-300. Integratable with industry-leading environmental, lighting and entertainment solutions, Venue offers a world-class travel experience.

With Venue, passengers and crew can have different levels of control. Passengers can program their temperature controls for personalized comfort, while crew members use a control panel in the galley for maintenance, water levels and other system operations.

Collins is globally recognized for delivering high-quality solutions that provide extraordinary capabilities designed to grow as technology advances. Upgrade your aircraft with the most modern cabin technology available without compromising quality.

## CABIN MODERNIZATION

### ENHANCE THE PASSENGER EXPERIENCE

Keep upgrade costs in check while adding more features with our one-size, one-price strategy. This package includes highly desirable technologies that integrate with Venue, such as Airshow® moving maps, to bring your cabin experience to the next level – without next-level costs.

Airshow provides a highly connected experience for your passengers. Passengers of every age are fascinated by the spectacular views of the world as they fly. Beautiful 3D graphics, sharp geographic detail, global coverage and an intuitive interface provide an unmatched, in-control view of the world around them. With its rich array of features and high-performance capabilities, Airshow represents the best of business aviation's most popular moving map systems.

### MAINTAIN FUNCTIONALITY

The passenger experience includes pushing buttons and adjusting bezels or monitors. When those items are in good working order, it builds confidence that the rest of the aircraft is well maintained, too. However, the status of equipment manufacturers can change over time, and replacement parts aren't always readily available. CL-300 owners are faced with the difficult decision of whether to retire the aircraft or update it.

Modernizing your aging and obsolete bulkhead monitors, bezels and push buttons with high-quality products from Collins is an efficient and sensible way to keep your aircraft flying. These are passenger-facing items that need to remain functional. To save a significant amount of time, money and frustration looking for obsolete parts, be proactive with a comprehensive cabin system upgrade from Collins Aerospace.
