INTELISIGHT™ ELECTRONIC FLIGHT FOLDER

STREAMLINING THE PILOT'S DAY

Integrates planning, data and tracking for greater efficiency

The Collins InteliSight™ Electronic Flight Folder (EFF) is designed around a day in the life of a commercial pilot, including direct user input from whiteboard concept through the agile development process to production release.

Our InteliSight EFF connects the user to the aircraft via our flexible Tablet Interface Module (TIM®) and Aircraft Interface Device (AID) architecture. The app enables improvements in operational efficiency by integrating flight planning, avionics data, flight performance tracking and weather data with real-time updates and notifications.

Collins Aerospace leverages expertise in both hardware and software to offer turnkey solutions for airline operators.

KEY FEATURES AND BENEFITS

- User-centric design with modern user interface

- Streamlines and automates routine tasks for commercial pilots

- Scalable system architecture facilitates light or full integration with airline IT systems

- Automated in-flight navigation logging with integrated note capability at each waypoint for data enhancement

- Automated post-flight reporting including pilot notes

- Operational flight plan uploaded to server and delivered electronically in application with update/edit/e-sign functionality

- iOS® and Windows® compatible

Collins Aerospace
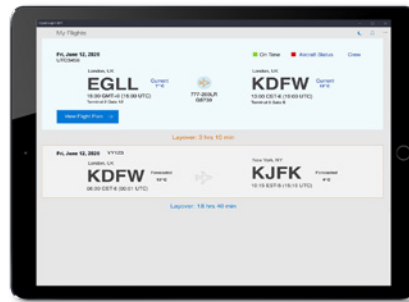

FEATURES AND BENEFITS

- Provides real-time aircraft performance data to flight crews
- Provides daily itinerary and flight plans for flight crews, including notifications of flight plan updates

- Integration and split-screen capability with third-party navigation charts
- Post-flight performance summary with optional user input to enrich flight reports

- Real-time performance tracking at each waypoint for in-flight optimization
- Combines with Collins Flight Profile Optimization (FPO) application for complete tracking of planned versus actual operations
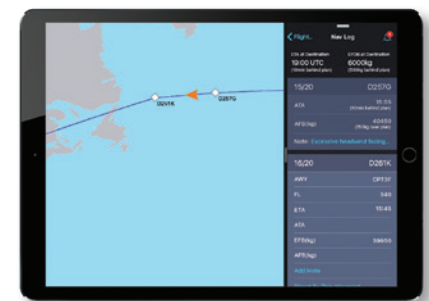

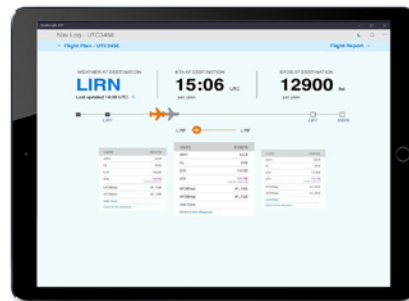

Windows® platform   iOS® platform

PRE-FLIGHT

- Flight plan review, updates and electronic approval
- Ability to view NOTAMs

IN FLIGHT

- Intuitive waypoint card view with real-time performance data
- Supports split screen

POST-FLIGHT

- Post-flight report with electronic approval
- Historical performance comparison and optional user input for flight report notes
