*1: Final AQP Status – In many cases the manufacturer corrected detected issues, some critical, during the course of the AQP test session. All reported results as of January 1, 2023
AQP NEWS & TRENDS: COVID-19

• COVID has not impacted our AQP program in 2022; we have maintained a normal schedule and met all commitments.

• On-site guests are welcome to support AQP testing of their products – however – guests are required to follow the same covid policies as employees which vary over time based on local transmission rates. Generally:
  o Daily self health checks are required
  o Currently, with low transmission rates, vaccination records & proof of negative test results are not required.

• Current policies will be conveyed to our guests prior to arrival.
NEWS & TRENDS IN AQP TESTING

• With the maturity of classic VHF-based avionics systems, the number of VHF AQP tests is continuing to decline and is being replaced with the testing of avionics supporting new communications media including Iridium, enhanced Swift Broadband-Safety, and ACARS over IP.

• Iridium Next/Certus Test Facilities and Test Procedures are complete and ready to support. Active AQP testing is expected to begin in 2QTR2023.

• The enhanced Swift Broadband-Safety (SB-S Ver 2.0) AQP facility and test procedures were completed in June 2020; we are supporting Phase 3 AQP tests. ATN-over-SB-S 2.0 (IRIS) testing will begin in 1QTR2023.

• Since September 2015, all VDLM2 capable avionics systems submitted for AQP must include functionality intended to comply with AEEC Standard 631-6 for Multi-Frequency operation.
NEWS & TRENDS IN AQP TESTING

• Current AQP Policy: Revision M: January 25, 2022. Revised to include many minor updates to current AQP practices but without major technical or program changes.

• For mature, AQP-approved suites, we are frequently able to Waive the AQP testing requirement for minor software updates. - Seventeen such waivers in 2022.

• Most avionics suites submitted for AQP support POA, VDL Mode 2 AOA and ATN plus long-range media (Aero-Satellite/Iridium/HF). - Complete AQP testing is averaging eight days.
AQP CLASSIFICATIONS

Pass: Avionics are fully compliant with AEEC standards and have unrestricted network use.

Waived: Avionics have minor deviations from AEEC standards that do not require additional RF resources. Unrestricted use.

Waived/Network-Impacting: Avionics have defects that will require additional RF resources. Unrestricted use; however, RF charges may apply in North America and Europe.

Failed: Avionics have serious problems that will impact the network and be disruptive to other airline messages. Restricted from use.

Not Tested: Avionics version has not been submitted for AQP testing. RF utilization charges will apply and possible termination of communications service.
