

Packaging Information for Vendors Hard Copies Uncontrolled. Verify Revision Prior to Use.	Engineer	Approved	
	K. Sindors	D.A.Verfaillie	
Nomenclature General Vendor Packaging	Part or Drawing No. PIV6012	Date 07-May-18	Revision 12
Instructions: This specification is provided to inform vendors of Raytheon Systems Company's minimum packaging requirements. This document is superseded by any special requirements listed on drawings or specifications. Suppliers must be able to provide proof of compliance to use of military specification materials called out in this document upon request by Supplier Quality. I. General Packaging Requirements: A. The packaging should allow for safe delivery of the shipment to its destination with no damage to the contents. B. Drop Shipments to the D.O.D. or Raytheon Customers shall be per MIL-STD-2073, Level A for both Foreign and Domestic Shipments. C. Follow ASTM-D3951 (Standard Practice for Commercial Packaging) except for Drop Shipments to the Customer (PIV6012, Section I, Sub-section B) or excluded items (PIV6012, Section I, Sub-Section D). D. Items excluded from ASTM-D3951: 1. Ammunition, explosives and hazardous materials 2. Tape and reel components 3. Plastic Encapsulated Microcircuits (PEMs) 4. All overseas shipments either to or from the Continental United States. E. This document provides supplemental details and clarification for items covered by ASTM-D3951. F. No packaging material is to be used that will leave any residue from the packaging material on the parts as a result of packaging or unpacking the product. G. Foreign Object Debris (FOD) 1. DO NOT USE LOOSE FILL MATERIAL IN ANY FORM. Loose fill material will be considered as any small piece of packaging material that can be poured into a container to fill void container space. Some examples of loose fill are packing peanuts, shredded paper or plastic, folded paperboard pieces and broken expanded polystyrene (Styrofoam) pieces. See ASTM D3951, Section 5.1.1.4. 2. There shall be no evidence of FOD in received containers. H. Staples are not to be used for the closure of packs due to several negative impacts: 1. When staples are removed they can become FOD 2. Staples do not provide for a proper seal of barrier bags 3. The removal process of staples can lead to potential personal injuries (eye and hand) I. Mitigate part movement 1. Helps to prevent part damage due to vibration such as scratches 2. Remove excess air from bags with multiple parts. Roll excess bag material around the bagged items and secure. 3. Fill void spaces with cushioning material or blocking (when necessary to mitigate part movement) J. "Pink Poly" in any form, used as cushioning, wraps, bags or dunnage/filler must comply with MIL-STD-3010, Method 3005. "Pink Poly" does not provide ESD shielding properties and may not be used to replace conductive materials as the ESD protective shielding medium for static sensitive devices. Acceptable "Pink Poly" material shall comply with military specifications (i.e. A-A-3129, Type I, Style B, Class 2, Grade B or PPP-C-795, Class 2). WARNING: The supplier must be able to supply proof of compliance to MIL-STD-3010, Method 3005.		Sheet No. 1 of 8	
Raytheon

Instructions:	Sheet No. 2 of 8
----------------------	---------------------

II. Packaging of Items Excluded from ASTM-D3951

A. Ammunition, Explosives and Hazardous Materials

1. Shall be packaged in accordance with **Title 49 of the United States Code of Federal Regulations (49 CFR)**.
2. The vendor will assure that packaging containing or intended to contain designated hazardous materials will be properly tested (Performance Oriented Packaging) and certified as complying with the performance standards of the United Nations and the United States Department of Transportation:
 - a) International Civil Aviation Organization
 - b) International Air Transport Association (Section 10)
 - c) International Maritime Organization (Volume 1, Annex 1, Section 8)
3. **Aluminum Electrolytic Capacitors**
 - a) **Packaging** - Capacitors that are categorized as HAZMAT materials shall be packaged in accordance with **Title 49 of the United States Code of Federal Regulations (49 CFR), Reference 49 CFR 173.176**. In addition to 49 CFR requirements, capacitors must also be packaged per **PIV6012, Section II, Sub-section E**. If any portions of PIV6012, Section II, Sub-section E are in direct conflict with 49 CFR, then 49 CFR shall take precedence over the requirements in direct conflict.
 - b) **Marking** - Mark per PIV6012, Section V. For capacitor specific marking requirements, see **PIV6012, Section V, Sub-Section H**.

B. Tape and Reel Components

1. The requirement for tape and reeling of components will be determined by the appearance of Quality Note MR (QNMR) on the purchase requisition.
2. QNMR instructions will provide tape and reel specifications. However, the tape and reeled lot is to be packaged (over-packed) for shipment in accordance with ASTM-D3951.

C. Plastic Encapsulated Microcircuits (PEMs)

1. Packaging, handling and marking of the PEMs shall be in accordance with:
JOINT INDUSTRY STANDARD, IPC/JEDEC J-STD-033
2. Major categories (but not limited to) J-bend and gull-wing leaded packages such as:
 - a) Plastic Leaded Chip Carriers (PLCC's)
 - b) Small Outline Integrated Circuits (SOIC's)
 - c) Plastic Quad Flat Packs (PQFP's)
 - d) Thin Small Outline Packages (TSOP's)
3. Mark all PEMs packages: "**DO NOT DE TRASH**"
4. Cover each populated JEDEC tray with an empty JEDEC tray as a cover, allowing each populated JEDEC tray the ability to be separated and shipped individually with its own cover if necessary.
5. Secure trays using non-stretching bands, straps or JEDEC tray clips.

Example Material: Correct Products, Inc., Part Number: VSI-24ESD

Web Address: <http://www.correctproducts.com>

Phone: 800-870-1199

D. Die Carriers

1. The word "shall" invokes a binding requirement for the supplier to meet.
 - 2.1 The supplier shall ensure all die are packaged in 2 inch by 2 inch conductive Fluoroware trays and lids, part number H2O series or equivalent and packaged to meet the following requirements.
 - 2.2 All die shall be oriented in the same direction with the bond pads facing upward and there shall be only one die per cavity.
 - 2.3 The package shall be chosen to allow for not more than 15 degrees of rotational movement and the internal grid shall be of a size to allow adequate removal via vacuum pick-up tool.
 - 2.4 The package lid, when in place, shall prevent intermingling of the die. The die carriers shall be packaged in conductive field-shielding barrier bags per MIL-PRF-81705, Type I, Class 1.

II. Packaging of Items Excluded from ASTM-D3951 (Continued)

E. Aluminum Electrolytic Capacitors

1. Each capacitor shall be **bonded/shorted individually**.
2. If the capacitors are removed from their original shipping container and packaged individually or in smaller groups than originally shipped, they must still be **individually bonded/shorted to allow for in-plant distribution of individual units**.
3. Bonding/shorting material shall be made of a solid piece of conductive removable material such as a bus bar or piece of bus wire.
4. Capacitors shall be packaged to prevent damage to each other when packaged together.
5. See **PIV6012, Section V, Sub-section H** for marking of capacitor packaging.
6. If unsure how to properly handle capacitors (specifically capacitors that do not have the terminals bonded or shorted together), contact customer engineering for guidance.

III. Supplemental Packaging Details for Special Items Following ASTM-D3951

A. Static Sensitive Devices

1. Package in compliance with ASTM-D3951 and use only packaging materials that will protect the part from electrostatic damage and corrosion during long-term storage and in-plant handling.
2. "Pink Poly" in any form, used as cushioning, wraps, bags or dunnage/filler must comply with MIL-STD-3010, Method 3005. **"Pink Poly" does not provide ESD shielding properties and may not be used to replace conductive materials as the ESD protective shielding medium for static sensitive devices.** Acceptable "Pink Poly" material shall comply with military specifications (i.e. A-A-3129, Type I, Style B, Class 2, Grade B or PPP-C-795, Class 2).
WARNING: The supplier must be able to supply proof of compliance to MIL-STD-3010, Method 3005.
3. Assure shielding bags conform to MIL-DTL-117, Class F and are made from MIL-PRF-81705, Type I barrier material.
4. Evacuate excess air (by vacuum or hand) and heat seal.
5. Desiccate items for drop-ship or over-seas shipments per MIL-STD-2073, Section 5.2.3.7
6. Affix static electricity labels as shown below or equivalent types to the unit package and exterior container when applicable.

III. Supplemental Packaging Details for Special Items Following ASTM-D3951 (Continued)

D. Cables and Cable Connectors

1. The packaging method must protect the connectors from physical damage and Foreign Object Debris (FOD).
2. Connectors on cables must be capped, bagged, covered with cushioning or wrapped.
 - a) Preferred method for protection of connectors on cables are appropriate sized conductive protective caps. Non-conductive caps may be used if the part is not ESD Sensitive.
 - b) Small cables with light connectors may use individual cable bagging to protect the connectors.
 - (1) The connectors may not directly touch each other.
 - (2) For coiled cables, coil in a manner that does not allow the connectors to touch.
 - c) Large, heavy connectors must either be individually capped with appropriate sized protective caps or individually protected with bags, wraps and/or cushions.
3. Packaging materials for cables
 - a) **Bags**
 - (1) All connector and cable bags shall be waterproof or water vapor proof.
 - (2) For bag closure, excess air shall be removed and the bag shall be heat sealed or sealed in a manner that assures a waterproof seal.
 - (3) Bags covering individual connectors on cables shall be taped per the taping instructions below.
 - b) **Cushioned Wraps**
 - (1) Cushioned wraps covering individual connectors on cables shall be taped per the taping instructions below.
 - c) **Tapes** - for securing cushioning and bags
 - (1) Allow no tape to contact the connector body
 - (2) Tapes allowed for securing that may contact the cable jacket/sleeving:
Non-Residual Tape: SAE-AMS-T-22085, Type II
 - (3) All other tapes may not contact the cable jacket/sleeving.

E. Items with Preservative Coatings, Open Ports or Containing Liquids

1. Preservative Coatings
 - a) To limit the amount of required cleaning, preservative coatings should only be used when necessary.
 - b) When preservatives are required, ease of cleaning should be taken into consideration when selecting preservatives.
 - c) Items coated with oil or grease based preservatives should be wrapped or bagged in a manner that prevents leaking using one of the following materials or equivalent:
 - (1) Water vapor proof, greaseproof bag: MIL-DTL-117, Class E
 - (2) Waterproof, greaseproof bag: MIL-DTL-117, Class C
 - (3) Water vapor proof, greaseproof barrier: MIL-PRF-131
 - (4) Waterproof, greaseproof barrier: MIL-PRF-121
2. All Open Ports should be capped, plugged or suitably covered to prevent leakage or contamination.
3. Items Containing Liquids
 - a) Package in a manner to prevent leakage inside the unit container
 - b) Mark the exterior unit container with orientation labels when the package orientation affects leakage

---------------	---------------------

V. Marking

- A. Markings shall be sufficient to clearly and visibly identify the contents of the package.
- B. Markings shall be in accordance with carrier rules and regulations.
- C. Hazardous or restricted items must be properly marked **in accordance with Title 49 of the United States Code of Federal Regulations (49 CFR).**

- 1. Exterior shipping packages (shipping cartons) shall be marked with U.N. certification markings indicating the level of performance achieved through testing.
- 2. For interior packaging such as cans and bottles, a certificate of compliance or actual test reports indicating the level of performance achieved through testing must be provided.

Reference Title 49 of the United States Code of Federal Regulations (49 CFR).

D. Minimum Container Markings

- 1. Minimum container markings apply to the unit container, the intermediate container (when unit containers are overpacked into an intermediate container) and the exterior shipping container.
- 2. Minimum container markings shall be **IN ADDITION TO** other required markings such as hazardous material markings.
- 3. Shipments within the Continental United States (CONUS) to Raytheon facilities shall be in accordance with **ASTM D3951, Section 5.1.6 except for Classified Items. The nomenclature shall not appear on the exterior container for Classified Items.**
- 4. All drop shipments to the Department of Defense shall be in accordance with **MIL-STD-129.**
- 5. Include precautionary markings, if applicable
 - a) Static Sensitive: Affix static electricity labels as shown below or equivalent types to the unit package and exterior container when applicable.

- b) Magnetic
- c) Fragile

E. Temperature Sensitive Materials (when required)

- 1. Only required when the item is susceptible to damage from temperature extremes due to the shipping or storage environment or when specified in the contract, purchase order or drawing.
- 2. Affix storage temperature warning labels
- 3. Locations of storage temperature warning labels
 - a) On the package closest to the product
 - b) On the outside shipping container

F. Lot, batch or identification control numbers (when required)

- 1. Only required when specified in the contract or purchase order.
- 2. Place on unit packs, intermediate containers and exterior containers.
- 3. Precede with the proper designation. (Example: LOT A03, Serial Number 15790)
- 4. Show adjacent to the contract number.

---------------	---------------------

V. Marking (Continued)

G. Shelf Life Marking (when required)

1. Only required when specified in the contract, purchase order, drawing or Q-Note other than PIV.
2. Apply shelf life markings as part of the item identification data to unit packs, intermediate containers, exterior containers and unpacked items.
3. Mixing different shelf life dates in the same unit container is not allowed.
4. When two or more unit packs of the same item are consolidated within any intermediate or exterior containers and have different shelf-life dates, the earliest dates shall be shown on those containers.
5. For items that contain rubber or synthetic elastomers, calculate dates from the cured date

6. Examples

a) **EXAMPLE 1 (TYPE I) - Non-Extendable Shelf Life Items, (Month/Year)**

MFD DATE 4/12

EXP DATE 4/16

b) **EXAMPLE 2 (TYPE II) - Extendable Shelf Life Items, (Month/Year)**

ASSEMBLED DATE 10/13

INSP/TEST DATE 10/16

c) **EXAMPLE 3 (TYPE II) - Identify cured items by calendar quarter, (Quarter/Year)**

CURED DATE 4Q13

INSP/TEST DATE 4Q16

H. Marking for Aluminum Electrolytic Capacitors

1. The unit package shall be marked "**DO NOT DE-TRASH**".
2. The unit package, intermediate package (if an intermediate container is utilized) and shipping container shall be marked:
"WARNING! Capacitors may contain an electrical charge. If found not bonded or not shorted (terminals not tied together with conductive material such as a bus wire or bus bar), handle with electrical safe work gloves rated for the voltage of the parts within."

VI. Quality Assurance

- A. Failure to comply with the requirements specified herein may result in rejection and return of consignment(s) to the supplier at their expense.
- B. For questions related to the application of this Packaging Information, please contact the Raytheon Buyer.
- C. Any exceptions to this document must be authorized by the Supplier Quality Representative.
