

# connect up

*“Connect Up leverages our global reach, the expertise and passion of more than 180,000 employees, a heritage of engineering and ingenuity, and a track record of solving some of society’s biggest challenges.”*

Greg Hayes  
Chairman and Chief Executive Officer  
Raytheon Technologies

**Raytheon Technologies** is making a 10-year, \$500 million-dollar commitment to foster connections that advance lifelong learning, support military families and veterans, and lift up our local communities.

Three things make this possible – the scale and global reach of our business, the diverse passions and talents of our more than 180,000 employees, and our heritage of solving big problems. These, along with focused investments, volunteer energy and strategic partnerships will enable us to drive lasting, generational impact by advancing equitable educational opportunity that expands economic mobility and supports community well-being.

## The power of connections to transform lives

Connection. It’s what binds our families, unites our society, and links our world together. Connections transcend barriers. Connections tie us to our heritage and guide us to our future. When we connect, we all move forward.

### Connect for Generational Impact

We advance **lifelong learning**, with a special focus on providing access to science, technology, engineering, and math (STEM) education to build a career-ready, diverse talent pipeline for the workforce of the future.

### Connect with Our Communities

We drive **local community impact** through partnerships that address social welfare to create a more equitable and secure future for generations to come.

### Connect to Those Who Serve

We **honor service** by providing education resources to military families, by mentoring veterans as they transition to the civilian workforce, and volunteer in military communities.

## Connect Up Strategic Impact Partners

---

Connect Up features a carefully curated ecosystem of strategic impact partners. These partners have been intentionally selected because of their focus on and proven success in making measurable impact on diversity in the next generation STEM workforce, supporting the post-service and career transition of military veterans, and meeting the basic needs of communities so that all individuals can realize their full potential.
