

Composable Weapons

Developing new weapons at the speed of relevance

Raytheon's Advanced Technology business is using scalable, foundational weapon components to speed the development time for fielding new capabilities.

Weapons are generally composed of the following subsystem elements:

Raytheon leverages **proven, affordable, and modular hardware components** that enable **rapid new weapon fielding and capability upgrades through software modifications**. Interfaces are defined to **enable modularity and interoperability** to remain in lock step with the U.S. government's weapon open system architecture, or WOSA.
